Technical data

IV-pole material:	stainless steel
Fabric:	100 % polyester
Height adjustment:	screw height adjustment
Regulating range:	700–850 mm
Hooks:	2 pcs., 2 kg/hook
Size:	appr. 350 x 795 mm
Weight:	appr. 1,6 kg

History behind the INFUBOY

„After two difficult operations and a long stay in the hospital I went to rehab. For three weeks and every four hours I had to take Infusion. The clinic was located on a steep hill with a nice view of the lake. Unfortunately for me, this time in the hospital only took place on the balcony because it was impossible for me to go out for a walk with my IV-Pole. My wife and I wondered how mountain farmers used to move through steep hills in the past while they transported all kind of things – and all of sudden, we thought about the wooden support frame farmers carried on their back during this time.

This same day, my wife constructed a frame made of roof battens with a longer rod in the middle that had hooks for IV-bottles. The frame and straps on the back side were padded. The first Infuboy had been created.

With the Infuboy on my back, I quickly learned to climb up stairs again, to move on uneven floors and soon after, we went across the street to enjoy a nice dinner down to the restaurant at the lake. It was almost like holidays.“

Prof. Dr. Bruno Krapf und Adelheid Giezendanner

Product advantages

Application

- + patient is able to move freely on slopes – even with infusion
- + The patient with its both hands free can hold himself onto a railing
- + light materials grant high wearing comfort

- + easy to clean plastic frame due to reduced adhesion of dirt

technology

- + bag (frame) made of high-quality plastic
- + comfortable screw height adjustment

safety

- + plastic frame without toxic ingredients
- + no risk of injury thanks to hooks that automatically fold

economy

- + washable bag (fabric) up to 60°
- + complete recyclability
